FY 99 Funding: \$150,000
Project Period: 7/1/99 - 6/30/00

To adapt the Michigan Supported Education Program for adults with SMI in several sites within the State.

Well-Being Institute
HIV/AIDS Outcomes & Costs
Congressional District: MI-13

Ann Arbor, MI
SM52407

FY 99 Funding: \$753,527
Project Period: 9/30/98 - 8/31/03

The Well-Being Institute will implement the Personalized Nursing HIV/AIDS Integrated Treatment Adherence Model to improve physical health, mental health, and well-being, and to decrease addiction among women living with HIV/AIDS in inner-city Detroit. The program, working in partnership with an infectious disease clinic, a mental health clinic, and an inner-city substance abuse program, is built on the hypothesis that mental illness and substance abuse issues must be addressed before adequate adherence to medical treatment can occur. Nurses play a key role in assessing each client's needs, identifying specific barriers to treatment adherence, and determining the family and social supports that are available to each client. They also will integrate each client's medical, mental, and addiction services, and recommend how the partner agencies can best meet her needs. Study participants will be assigned to one of three groups. Women assigned to the first group will be under the care of a physician at an infectious disease clinic. Women in the second experimental group will have been reassigned through managed care to other physicians who agree to cooperate with the study. Both of these groups will receive the integrated treatment adherence model. Women in the third group will serve as the control group. They will undergo periodic assessment, but their physicians do not participate in the study. The project hypothesis is that women in the first two groups will show greater improvements in their health than the control group and that health outcomes will improve as treatment adherence improves. The project also will collect and analyze cost data to determine if the cost of an integrated program is offset by reduced medical treatment costs. The study's findings will be used to develop an adherence treatment protocol that has proven to be cost-effective for managed care systems and HIV care providers.

FY 99 Funding: \$228,564

Project Period: 9/30/98 - 8/31/01

Detroit, MI

SM52339

This program is built on 10 years of experience in providing training and education opportunities for a broad range of traditional and non-traditional mental health care providers. The program's target audience consists of mental health providers representing at least 10 different traditional and non-traditional mental health and health care disciplines. The program uses curriculum modules to address the general and advanced training needs of participants, including training in the neuropsychiatric aspects of HIV/AIDS, HIV pharmacotherapy, and HIV psychopharmacotherapy. During the course of the program, the project will introduce two new curricula. The first will focus on family-centered HIV care. The second will deal with assisting people living with HIV/AIDS in adhering to their treatment regimen. Some training modules will be available on the Internet. The project's Multicultural Advisory Committee and Program Planning Committee will help ensure that the program is both culturally diverse and culturally competent. In addition, the project's evaluation plan includes process, outcome, and impact criteria, which will help the program better prepare trainees to provide state-of-the-art care to people living with HIV/AIDS and their partners, families, and friends.

FY 99 Funding: \$529,689

Project Period: 9/30/98 - 8/31/02

East Lansing, MI

SM52227

This project will evaluate the impact of adding a program -- Building Recovery of Individual Dreams and Goals through Education and Support (BRIDGES) -- to traditional services and compare that effect to the provision of traditional services alone. The design is randomized and proposes a cost-effectiveness analysis and the use of advanced statistical techniques. Separate rural/urban comparisons will also be undertaken across satellite services sites.

Congressional District: MI-08

East Lansing, MI
SM52536

FY 99 Funding: \$59,980
Project Period: 9/30/98 - 8/31/01

This project will build on the extensive activities of the Association for Children's Mental Health (ACMH) staff and members, and will be enhanced by current resource development and strategic advocacy planning project grants. A crucial element of this grant will be the establishment of an ongoing system of support and training for the regional family networks of families whose children experience mental health needs. The project is designed to develop sustainable regional family networks across the State that, with assistance from State ACMH staff, will develop the methods and resources to enable family members to serve as leaders, skilled advocates, and policy makers; to allow them to strengthen collaboration among families, service providers, community personnel and policy makers; and to broaden the concept of family to one of family support. The target population is the families of children with mental health needs and the policy makers in the communities where they live.

The Southwest Community Partnership is developing an integrated, comprehensive system of care for children with serious emotional disturbance and their families in the community of southwest Detroit, Michigan. The partnership builds on extensive collaborative work undertaken in Michigan and Wayne County over the past several years. The system of care being developed will be family-driven and culturally-competent and offer a full continuum of individualized, case-coordinated services across multiple service systems in the largest and most ethnically diverse county in Michigan. The Southwest Community Partnership will within 5 years (1) develop a complete system of care for children with serious emotional disturbance and their families, (2) provide individualized wraparound services to more than 400 children and their families, (3) demonstrate the use of a blended funding and support managed care model, (4) link the model with the State behavioral health managed care plan, (5) strengthen individual families and child-parent advocacy organizations in southwest Detroit, and (6) implement an automated plan of care and financial management software. Southwest Detroit Community Mental Health Services will utilize grant funds to expand its comprehensive services in home-based services, respite care, behavioral aides, family support, wraparound case management, youth-to-adult transition services, and therapeutic foster care.

Project Period: 9/30/98 - 8/31/01

Sault Ste Marie, MI

SM52261

The program is titled Nbwakawn, or "wisdom which speaks from the heart". through community meetings, they will access the strengths and wisdom of their ancestors to reestablish a healthy traditional family system for children with serious emotional behavioral or mental disorders. They will work at three tribal sites, representative of the current mental health systems, to design a new system of care, based on the Anishnabek concept of health and wellness; and will assess whether and how this new/old model will work in the modern world.

The Sault Ste. Marie Tribe of Chippewa Indians in partnership with the Bay Mills Tribe of Chippewa Indians and Hiawatha Behavioral Health have initiated a program to effectively address the issue of children with serious emotional disturbances and their families within the Native American Community. The programs are: 1) determine prevalence of mental health disorders among Native American children and adolescents; 2) reduce the prevalence of mental disorders among Native American children and adolescents to less than 10 percent; 3) offer a comprehensive system of care to Native American children with serious emotional disturbance and their families; and, 4) increase community awareness so that at least 75% of the providers in the area use appropriate assessment tools, counseling, referral and follow-up with Native American children and their families.

FY 99 Funding: \$99,435
Project Period: 9/30/98 - 9/29/01

Goals for this collaborative effort are faculty training, community linkage, and curriculum development/dissemination. Faculty fellows will work collaboratively with community-based organizations to expand and improve substance abuse prevention services in those organizations. Target populations are a broad array of ethnic, cultural, and socioeconomic groups residing in southwestern Michigan. Participants will develop new lectures, seminars, courses, and training materials on prevention to be infused into a curriculum. They will also design a unique seminar series that addresses learning objectives to be delivered to graduate students, other trainees, FDP advisors and other faculty.

NSO will adapt a project to provide HIV/AIDS and substance abuse prevention program for African American youth on the east-side of Detroit. The residents within the target area are at risk for sexually transmitted diseases, HIV infection, substance abuse, homicide, congenital spread of STDs and tuberculosis. The goals of this project are to: increase knowledge and education of HIV/AIDS/STDs and substance abuse prevention in African American youth in the target area; and to increase social networks to enable and reinforce health enhancing behavior change through peer modeling and peer support. There is an increased need for adaptive programs at the community-based level that will combine street outreach in the African American community with support services.

Targeted Capacity Expansion for Substance Abuse Prevention
and HIV/AIDS

SP08968

Congressional District: MI-15

FY 99 Funding: \$299,484

Project Period: 9/30/99 - 9/29/02

Operation Get Down will provide services to female youth, age 12-17. The focus of this project will be on substance abuse prevention, violence prevention, coping/negotiation skills and positive cultural identification as it relates to HIV prevention in both groups. The model that will be used is Prochaska Model for Change. The key elements of this model is that it's targeted to a specific population that will receive training and that it will be skill based. The prevention modality is culturally relevant, includes contraceptive education, STD and HIV risk reduction strategies, frank open discussion, negotiation and condom use skills, and strategies that promote teen access to health services.

Detroit, MI

Workplace/Managed Care

SP08146

Congressional District: MI-05

FY 99 Funding: \$662,040

Project Period: 9/30/97 - 9/29/00

The Workplace Managed Care effort demonstrates the effectiveness of managed-care models in the workplace to prevent and treat substance abuse. The Council is conducting a study to determine the effectiveness of the DrinkWise Program, an alcohol management program that helps individuals cut back on their drinking or quit altogether through the managed health care program, M-Care within the Ford Motor Company. Participants receive education and skill development through a counselor and client handbook to assist clients in changing their behavior with alcohol. Clients examine their attitudes and behaviors, attain new knowledge about drinking, and develop specific skills to achieve healthier drinking habits. Additionally, there is an interface with worksite wellness programs focusing on biometric screening, risk appraisal, counseling, and goal setting.

This program will serve adolescents ages 10-23 at eleven federally recognized tribes in the State of Michigan. Helping Hands is based on the family preservation model. Family-centered services, provided in collaboration with tribal and State child service providers, will give a wrap-around array of support. This will be a holistic, culturally-based approach. By the end of year 02, 220 adolescents (20 per site) will receive outpatient treatment. This will be a time-limited, ambulatory treatment program, consisting of lectures, individual and group counseling, educational assistance, and cultural activities.
